This follow-up report covers our analysis of the mortgage covered bond program issued under Austrian law by Erste Group Bank AG („Erste Group Bank“). The total covered bond issuance at the cut-off date (30.09.2022) had a nominal value of EUR 18,848.78 m., backed by a cover pool with a current value of EUR 25,793.90 m. This corresponds to a nominal overcollateralization of 36.85%. The cover assets mainly include Austrian mortgage obligations in Austria.

Taking into consideration the issuer rating, our analysis of the regulatory framework, liquidity- and refinancing risks, as well as our cover pool assessment and results of the cash flow analysis, Creditreform Rating AG (“Creditreform Rating” or “CRA”) affirms the covered bond program with an AAA rating. The AAA rating represents the highest level of credit quality and the lowest investment risk.

## Key Rating Findings

- + Covered Bonds are subject to strict legal framework (PfandBG)
- + Current high overcollateralization of 36.85% as of 30.09.2022
- + Above-average capital ratios and liquidity ratios of Erste Group Bank
- + Business result of Erste Group Bank in 2021 above pre-crisis year; half-year figures confirm positive trend
- +/- Strong presence of the issuer in the growth markets in Eastern Europe with opportunities and risks

Table1: Overview results

Risk Factor	Result
Issuer rating	A (rating as of 28.09.2022)
+ Legal and regulatory framework	+4 Notches
+ Liquidity and refinancing risk	+1 Notch
= Rating after 1 <sup>st</sup> uplift	AAA
Cover pool & cash flow analysis	AAA
+ 2 <sup>nd</sup> rating uplift	+/-0 Notch
= Rating covered bond program	<b>AAA</b>

## Issuer Risk

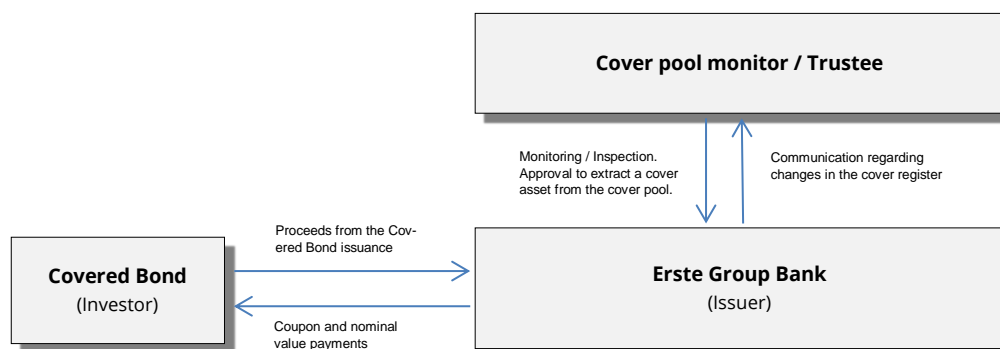

### Issuer

Our rating of Erste Group Bank covered bond program is reflected by our issuer rating opinion of Erste Group Bank (group). CRA has affirmed the Long-term rating of Erste Group Bank at A in a Rating Update dated 28.09.2022. Erste Group aims to be the leading retail and corporate bank in Eastern Europe. The core market continues to be the Sparkassen in Austria. Erste Group Bank AG, as a holding company, was able to both significantly increase its profitability in the financial year 2021 and recover from the Corona crisis, and even increase its profitability compared to the ordinary financial year 2019. At group level, profitability was also significantly increased compared to 2019. As of H1 2022, Erste Group Bank continued to significantly increase its operating income at group level on a full-year basis, mainly driven by higher net interest income and net fee and commission income. The positive outlook is justified by the expectation that there will be no significant deterioration in profitability and asset quality in the medium term due to the war in Ukraine and rising consumer prices. In the short term, rising consumer prices may impact the Group's asset quality. For a more detailed overview of the issuer rating, please refer to the webpage of Creditreform rating AG.

## Structural Risk

### Transaction structure

Figure1: Overview of Covered Bond emission | Source: CRA

## Legal and Regulatory Framework

The new Mortgage Bond Act („PfandBG“) which entered into force on July 08, 2022 provides the legal basis for covered bonds issuances in Austria. This repealed the existing three legal frameworks for covered bonds, namely Pfandbrief Law (Pfandbriefgesetz, „PfandBG“), the Mortgage Banking Act (Hypothekenbankgesetz, „HypoBG“) and the Covered Bond Act (Gesetz über Fundierte Bankschuldverschreibungen, „CBA“).

The new PfandBG follows the EU Parliament's resolution of 27 November 2019 on the EU "Covered Bond Directive" and "Covered Bond Regulation" to harmonize European covered bond legislations. The government bill for the new PfandBG was approved by the Federal Cabinet on July 28, 2021 and passed by the National Council on November 19, 2021. The new PfandBG created a modern and uniform legal basis for covered bonds by harmonizing the content of the three existing national laws, which ensures with its transitional regulations that every Cover Pool and its associated Covered Bonds can be perpetuated safely.

In continuation of the three previous laws, only duly licensed credit institutions with the appropriate special authorization are entitled to issue covered bonds. Credit institutions that have already issued covered bonds retain their license to issue under the new law.

A comprehensive overview of the initial legal and regulatory framework can be found in our initial report of Erste Group Bank Mortgage Covered Bonds.

## Bankruptcy Remoteness and Asset Segregation

Cover assets remain on the consolidated balance sheet of the issuer and are not transferred to an independent legal representative ("in-balance" transaction). The cover register in which all cover assets are entered must be identified and registered. In the event of an issuer default, the cover assets and any existing overcollateralization combined will be identified and separated from the remaining assets of the issuer. This segregation of cover assets fully complies with EBA Best Practices for structuring and harmonizing national covered bond legislation.

In the event of a default of the issuer, the registered cover assets are marked as non-insolvent part of the issuer estate and isolated from the bankruptcy estate; they form the insolvency-remote assets of the issuer and will not be affected by insolvency proceedings. If the cover pool is insufficient to fully service the claims of the covered bond creditors, the bond holders have recourse to the bank's aggregate bankruptcy estate in a *pari passu* relationship with other unsecured bond creditors. If the cover assets are not required in full to meet interest and principal payments, they are transferred to the issuer's bankruptcy estate.

## Trustee

In principal, a trustee monitors the assets in the cover pool. The trustee must ensure that the cover assets are available at all times and that they are duly recorded in the cover register.

In addition to the option of an external trustee, the new law stipulates that the issuers has an option of establishing their own risk management department, independent of operations, in the function of an internal trustee to monitor the cover pool. The internal trustee must ensure the identification, assessment, management and monitoring of all risks associated with covered bonds.

## Special Administrator

If an issuer defaults, the cover assets are managed by a special administrator ("besonder Verwalter") selected by the bankruptcy court and the FMA authority. The special administrator can sell assets or take out loans to increase liquidity and manages the covered bond program.

The administrator is required to find a credit institution to which the covered bonds can be transferred together with their cover assets. If such disposition does not occur, the administrator must ensure the management of the assets in the cover pool and the servicing of the outstanding covered bonds until the final payment. In addition, the special administrator must collect the cover assets in accordance with the contractual maturities and may influence the level of voluntary overcollateralization which enters into the general insolvency estate to the extent that it is evident that it will not be needed to cover the claims of the covered bond holders.

## Eligibility Criteria

The PfandBG requires a separation of assets according to Art. 129 (1) of Regulation (EU) No. 575/2013 and according to other high-quality cover assets. The former asset category includes mortgage loans, public or publicly guaranteed assets and loans secured by ship liens. For each type of asset, the issuer must establish a separate cover pool. Pfandbriefe covered by first category assets also qualify for the designation "European Covered Bond (Premium)".

Replacement cover assets in accordance with the requirements of Art. 129 (1) of Regulation (EU) No. 575/2013 may be in the cover pool, but may not exceed the limit of 15% of the outstanding Pfandbriefe.

Covered bonds backed by public sector entities (central governments, central banks, regional governments or local authorities) are referred to as "öffentliche Pfandbriefe". Eligible cover assets for "Hypothekendarlehenpfandbriefe" are loans covered by residential or commercial mortgages (with the explicit consent of the borrower for use in a cover pool pursuant to the new PfandBG). LTV limits are not explicitly mentioned in the PfandBG, but are derived from Art. 129 (1) of Regulation (EU) No. 575/2013. An LTV limit of 60% applies for commercially used properties. For residential properties, this limit is 80%.

The geographical scope of eligible mortgage loans and public assets is limited to the EU / EEA countries as well as Switzerland and United Kingdom.

Under the regulatory frameworks, derivatives are only permitted if they are used to hedge risks. The amount of derivatives in the cover pool is not limited, but must be adjusted if the scope of the hedged risk changes. The early termination of derivative contracts in the cover pool in the event of a bankruptcy of the issuer is not permitted under supervisory law, which corresponds to the proposals of the EBA Best Practices.

Substitute assets such as cash, bank balances and bonds issued by public issuers from EEA countries and Switzerland may be included in the cover pool but may not exceed the limit of 15% of the outstanding covered bonds. Asset Backed Securities and Mortgage Backed Securities may not be part of the cover pool. These regulations are fully in line with EBA Best Practices.

In general, we consider the structural framework in Austria under the new PfandBG as positive as it provides clear rules to mitigate risks in particular regarding insolvency remoteness, asset segregation, investor's special claim vis-à-vis other creditors, the roll and appointment of a special administrator, among other provisions. Furthermore, we contemplate the importance of Erste Group Bank in the Austrian covered bonds market in our analysis. Due to those reasons

we have set a rating uplift of four (+4) notches for the regulatory and structural framework for Austrian covered bond programs under PfandBG.

## Liquidity- and Refinancing Risk

### Minimum Overcollateralization

Under the new PfandBG, issuers must maintain a minimum level of overcollateralization (OC) of 2% of the nominal value of the outstanding covered bonds, which must be held in cover assets or in assets eligible for substitution. At the issuer's discretion, this cover may also additionally be provided on a present value basis. In order to comply with rating requirements and stress tests, issuer's may also provide higher OC level at their discretion.

### Short-term Liquidity Coverage

The PfandBG provides for a mandatory liquidity buffer for the cover pool. Issuers must ensure that a liquidity buffer for the next 180 days is available to cover the maximum net liquidity outflows and that the timely repayment of liabilities from covered bonds issued after July 8, 2022 under the new PfandBG is guaranteed.

### Stress Tests

Issuers may conduct voluntary stress tests to monitor the cover pool for interest rate-, currency- and other risks; however, there are no regulatory obligations that require issuers to perform specific stress tests on their covered bond programs. Derivatives can be an additional measure to hedge interest rate and currency risks.

### Asset-Liability Mismatch

An asset-liability mismatch ("ALM") arises in the case of different maturities between cover assets and covered bonds. Under the new PfandBG, an option for extending the maturity of covered bonds is implemented in order to reduce potential liquidity risks. In the event of insolvency, the special administrator has the one-off option to postpone maturity by up to 12 months if there is a market disruption and the special administrator can assume with a high degree of probability that the liabilities can be serviced in full on the extended repayment date. A postponement of maturity in the event of insolvency or liquidation of the credit institution shall not change the ranking of investors or the sequence of the original schedule of maturities of the covered bond program. In this context, investors shall receive sufficient information on the objective triggering events, the maximum maturity postponement, interest rate agreements, the possible effects of maturity extensions and the role of the FMA, the resolution authority and the insolvency administrator. The maturity deferral is not at the discretion of the issuer, but is triggered by the insolvency administrator. As the Issuer has issued covered bonds with a soft bullet repayment method under the existing programme, we have quantitatively considered this fact in our cash flow analysis.

### *Refinancing costs*

In the event of a bankruptcy of the issuer, the legal frameworks provide that the special administrator may sell assets of the cover pool or use them as a guarantee for liquidity operations when liquidity shortfalls are foreseeable.

CRA's analysis assumes that refinancing gaps due to ALM will be closed by a sale of assets from the cover pool. In doing so, we take into account related costs in the form of a discount to the nominal value. The quantification of this discount takes place following an analysis of relevant market data and enters into the cash flow analysis.

In the course of the harmonization of European covered bond legislation and with the implementation of the new PfandBG as of July 08, 2022, the legal and regulatory requirements, in particular for liquidity and risk management, have been significantly expanded for Austrian covered bonds. With the mandatory introduction of a liquidity buffer of 180 days and minimum overcollateralization, sufficient structural protection mechanisms have been established overall. Refinancing risks are significantly reduced structurally due to the possible postponement of maturities.

We assess the statutory regulations on risk and liquidity management for covered bond programs under the PfandBG as positive and set a rating uplift of one (+1) notch.

## ESG Criteria

CRA generally takes ESG-relevant factors (environmental, social and governance) into account when assessing Covered Bond ratings. Overall, ESG factors have a significant impact on the current rating of this Covered Bond program. CRA identifies governance factors, in particular, to have a highly significant impact on Covered Bond ratings. Since Covered Bonds are subject to strict legal requirements, regulatory risk plays an important role in assessing the credit rating.

The new PfandBG provides clear rules to mitigate risks in particular regarding insolvency remoteness, asset segregation, investor's special claim vis-à-vis other creditors, the roll and appointment of a special administrator, among other provisions. Additionally, Risk management and internal controls as well as the macroeconomic factors such as hedging strategies, interest rates and yield curve are considered to have a highly significant impact on the assessment of the credit rating. Other individual factors with a potential key rating influence were not identified, and therefore did not affect the final rating.

## Credit and Portfolio Risk

### Cover pool analysis

The analysis of the cover pool is based on public information which has been made available by the Issuer, in particular the Austrian Transparency Template („ATT“) as per regulatory requirements. This information was sufficient according to CRA's rating methodology "Covered Bond Ratings".

At the cut-off-date 30.09.2022, the pool of cover assets consisted of 109,761 debt receivables from 88,692 debtors, of which 97.86% are domiciled in Austria. The total cover pool volume amounted to EUR 25,793.90 m. in residential (59.26%), commercial (40.74%) and others (0.00%) loans.

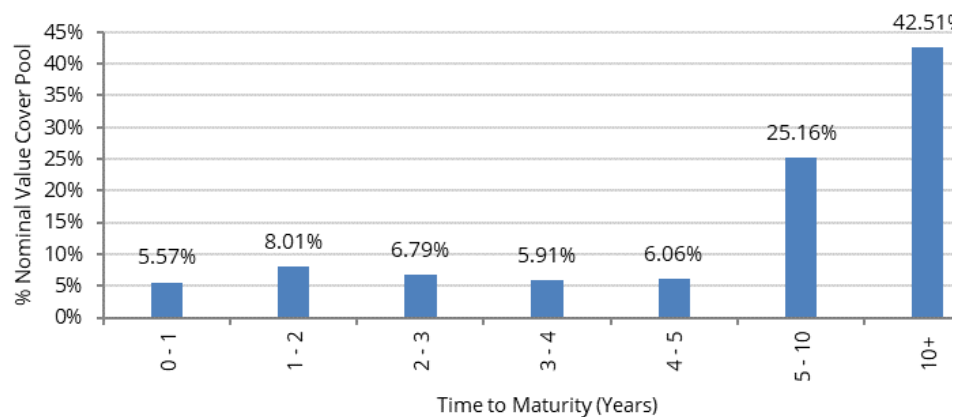

The residential cover pool consists of 93,753 mortgage loans having an unindexed weighted average LTV of 73.36%. The non-residential cover pool consists of 16,008 mortgage loans having an unindexed weighted average LTV of 60.45%. The ten largest debtors of the portfolio total to 2.38%. Table 2 displays additional characteristics of the cover pool:

Table 2: Cover pool characteristics | Source: Erste Group Bank

Characteristics	Value
Cover assets	EUR 25,794 m.
Covered bonds outstanding	EUR 18,849 m.
Substitute assets	EUR 0.00 m.
Cover pool composition	
<i>Mortgages</i>	100.00%
<i>Substitute assets</i>	0.00%
<i>Other / Derivative</i>	0.00%
Number of debtors	88,692
Mortgages Composition	
<i>Residential</i>	59.26%
<i>Commercial</i>	40.74%
<i>Other</i>	0.00%
Average asset value (Residential)	EUR 163.03 k.
Average asset value (Commercial)	EUR 656.50 k.
Non-performing loans	0.00%
10 biggest debtors	2.38%
WA seasoning	NR
WA maturity cover pool (WAL)	10.07 Years
WA maturity covered bonds (WAL)	5.29 Years

We have listed an extended view of the composition of the cover pool in the appendix section “Cover pool details”. The following chart displays the maturity profile of the cover assets at the cut-off date 30.09.2022 (see figure 2):

Figure 2: Distribution by remaining time to maturity | Source: Erste Group Bank

## Maturity profile

The following charts present the cash flow profile of the Issuer (see figure 3 and figure 4):

Figure 3: Cover asset congruence | Source: Erste Group Bank

Figure 4: Amortization profile | Source: Erste Group Bank

During its cash flow modelling, CRA has taken into consideration the maturity structure of cover assets and liabilities. This structure was an integral part of the cash flow analysis.

### Interest rate and currency risk

The legal framework provides for weekly stress tests to be conducted on interest rate- and currency risks. Therefore, interest rate risk could be mitigated by the 2.00% OC requirement. Currency risk, on the other hand, is also limited for this program as 96.15% of the cover pool assets and 98.89% of the covered bonds are denominated mainly in euro. Nevertheless, we have applied interest rate and foreign exchange stresses on the cash flows for each rating level according to our methodology.

Table 3: Program distribution by currency | Source: Erste Group Bank

Currency	Volume	Share (%)
Cover Pool		
EUR	24,800 m.	96.15%
CHF	994 m.	3.85%
Covered Bond		
EUR	18,640 m.	98.89%
CHF	209 m.	1.11%

Figure 5 shows the types of interest rate used in this program.

Figure 5: Type of interest rate | Source: Erste Group Bank

## Credit Risk

The credit risk assessment for Mortgage Covered Bond have been determined in accordance with CRA rating methodology for Covered Bonds by means of historical data and particular parameters from the Covered Bonds.

Due to the high granularity of mortgage pools we have characterized these portfolios as big enough and with a homogeneous composition i.e. ("Large Homogeneous Portfolio", LHP). Furthermore, under that premise we have assumed that it is possible to derive a loss distribution. CRA has used the issuer's historical NPL ratios to derivate a conservative default rate proxy for the approximation through the LHP distribution. For the Erste Bank Group it has been assumed an expected default rate of 0.57% for the LHP. Furthermore, CRA has considered a 15.00% correlation to define the LHP distribution. Table 4 disclosed the expected default rate for each relevant rating level.

In order to derive recovery and loss-severity base case assumption, CRA has used historical data from mortgage price indexes. To determine loan-level recovery assumptions the resulting stressed recoveries assumptions were compared with the portfolio's existing loan-to-value ratios (LTVs).

Based on the default rates and taking into account the recovery assumptions, the following loss assumptions were determined for the current cover pool (see Table 4):

Table 4: Cover Pool Base case assumptions | Source: CRA

Rating	Default Rate (%)	Recoveries (%)	Expected Loss (%)
<b>AAA</b>	<b>30.63%</b>	<b>61.32%</b>	<b>11.85%</b>
AA+	28.15%	63.05%	10.40%
AA	23.87%	66.32%	8.04%
AA-	20.59%	68.93%	6.40%
A+	19.26%	69.99%	5.78%
A	19.25%	70.00%	5.77%
A-	18.45%	70.69%	5.41%

## Cash-Flow Analysis

### Model Assumptions

Based on public information and using the base case loss assumptions, we implement a scenario-based cash flow model. This model aims to test the ability of the structure to service all covered bonds according to their payment profile in diverse stress scenarios. The CRA cash flow analysis assumes that the Issuer has defaulted, i.e. all obligations will be met using cash flows from the cover pool assets only. We also assume that no additional assets will be added to the cover pool during the wind-down phase.

This covered bond program uses a soft-bullet repayment method of covered bonds, i.e. an extension of maturities up to 12 months. This feature has been considered quantitatively during our cash-flow analysis.

The cash-flow analysis considers, among other factors, asset value haircuts ("asset-sale discount"), and the possible positive yield spread between covered assets and covered bonds ("yield spreads"). To derive the asset-sale discount, CRA assumes, based on secondary market data, a rating level haircut on the asset value. Furthermore, CRA, using available public information (i.e. issuer's annual accounts), has derived estimations for yield spreads (see table 5):

Table 5: Cash-Flow Model assumptions | Source: CRA

Rating level	Asset-Sale Discount	Yield Spread
<b>AAA</b>	<b>72.93%</b>	<b>1.60%</b>
AA+	67.35%	1.64%
AA	63.75%	1.67%
AA-	60.33%	1.70%
A+	57.70%	1.72%
A	55.54%	1.73%
A-	52.72%	1.76%

### Rating Scenarios

In our cash flow model rating scenarios have been tested considering several central input parameters, such as:

- Portfolio composition (diversification, concentration, granularity)
- Probability of default of cover assets
- Correlations of cover assets and systematic risk factors
- Recoveries
- Maturity profile of covered bonds and cover assets (ALM)

Within an AAA rating scenario, the cash flow model showed obligations can be paid fully and in a timely manner. Overall, the cash flow analysis revealed that the portfolio, given all used information as of 30.09.2022, may ensure the repayment of bonds' nominal capital notwithstanding the occurrence of the presented stressed scenarios.

### Overcollateralization Break-Even Analysis

CRA also performed a break-even OC analysis taking into considerations the following drivers: ALM, Loss level, Interest rate spreads, foreign currency mismatches and Recoveries. Performing

the break-even OC analysis, we took rating-level specific stressed outcomes into account. Based on these analyses, the maximum OC required for each relevant rating level during the whole period has been presented in table 6.

Table 6: Breakeven Analysis | Source: CRA

Rating Level	Break-Even OC
AAA	<b>20.10%</b>
AA+	17.43%
AA	14.16%
AA-	11.73%
A+	10.51%
A	10.01%
A-	8.99%

## Sensitivity Analysis

CRA also evaluates the sensitivity of the structure and program with respect to important input parameters. In particular, the following factors have been varied:

- Credit quality of cover assets
- Recoveries

The following table presents the rating impact of a decline in recoveries and an increase in the credit risk of single debtors. Starting from the best-case, which is represented by our base case assumptions, the analysis reveals the sensitivity of the rating with respect to recovery rates and credit risk. The worst-case scenario, in which we reduce recoveries by 50% and increase credit risk by 50%, the impact can be seen by a change in the implied rating scenario of 2 notches (see Table 7):

Table 7: Covered Bond Program Sensitivity: Credit Quality und Recovery Rates | Source: CRA

Recovery Defaults	Base Case	-25%	-50%
Base Case	<b>AAA</b>	AAA	AAA
+25%	AAA	AAA	AA+
+50%	AAA	AAA	AA

In general, based on the presented cash flow analysis results, the rating of the cover pool within our covered bond program rating has been set at AAA. Considering the issuer rating and the assessment of the legal framework, the cash flow analysis does not result in a further uplift, but increases the buffer against a downgrade of the issuer. Consequently, the secondary rating uplift was set at zero (+/-0) notch.

## Counterparty Risk

### Derivatives

No derivatives in use at present.

## Commingling

In the event of issuer's bankruptcy, in order to avoid commingling of funds, the PfandBG stipulates that the cover assets should be isolated from the general bankruptcy estate (insolvency-free assets) and a special administrator will be appointed to manage the cover pool. Under that mandate the special administrator will have first priority on the up-coming cash flows from the cover pool assets, which in turn should be used to cover interest and principal payments of the covered bond holders in event of the Issuer's insolvency.

With Access to Internal Documents	NO
With Access to Management	NO

The rating is based on publicly available information and internal evaluation methods for the rated bank and program. The issuer's quantitative analysis is based mainly on the latest annual accounts, interim reports, other information of the bank pertaining to investor relations, and key figures calculated by eValueRate/CRA. The cover pool's quantitative analysis for the rated Covered Bond Program was based on the "Austrian Transparency Template" (ATT) published by the Erste Group Bank.

A complete description of Creditreform Rating's rating methodologies and Creditreform's basic document "Rating Criteria and Definitions" is published on the following internet page:

<https://www.creditreform-rating.de/en/about-us/regulatory-requirements.html>

This rating was carried out by analysts Philip Michaelis (Senior Analyst) und Bruno Passos (Analyst) both based in Neuss/Germany. On 14.11.2022, the rating was presented to the rating committee by the analysts and adopted in a resolution. The function of Person Approving Credit Ratings (PAC) was performed by Christian Konieczny (Senior Analyst).

On 14.11.2022, the rating result was communicated to Erste Group Bank, and the preliminary rating report was made available. The Issuer and all relevant parties examined the rating report prior to publication and were given at least one full working day to appeal the rating committee decision and provide additional information. The rating decision was not amended following this examination.

The rating is subject to one-year monitoring from the creation date (see cover sheet). Within this period, the rating can be updated. After one year at the latest, a follow-up is required to maintain the validity of the rating.

In 2011 Creditreform Rating AG was registered within the European Union according to EU Regulation 1060/2009 (CRA-Regulation). Based on the registration Creditreform Rating AG (CRA) is permitted to issue credit ratings within the EU and is bound to comply with the provisions of the CRA-Regulation.

## Endorsement

Creditreform Rating did not endorse the rating according Article 4 (3), CRA-Regulation.

## Conflict of Interests

No conflicts of interest were identified during the rating process that might influence the analyses and judgements of the rating analysts involved or any other natural person whose services are placed at the disposal or under the control of Creditreform Rating AG and who are directly involved in credit rating activities or approving credit ratings and rating outlooks.

In the event of provision of ancillary services to the rated entity, CRA will disclose all ancillary services in the credit rating report.

## Rules on the Presentation of Credit Ratings and Rating Outlooks

The approval of credit ratings and rating outlooks follows our internal policies and procedures. In line with our policy "Rating Committee," all credit ratings and rating outlooks are approved by a rating committee based on the principle of unanimity.

To prepare this credit rating, CRA has used following substantially material sources:

1. Transaction structure and participants
2. Transaction documents
3. Issuing documents
4. Other rating relevant documentation

There are no other attributes and limitations of the credit rating or rating outlook other than displayed on the CRA website. Furthermore, CRA considers satisfactory the quality and extent of information available on the rated entity. In regard to the rated entity, Creditreform Rating AG regarded available historical data as sufficient.

Between the disclosure of the credit rating to the rated entity and the public disclosure no amendments were made to the credit rating.

The rating report and/or press release indicate the principal methodology or version of methodology that was used in determining the rating, with a reference to its comprehensive description.

In cases where the credit rating is based on more than one methodology, or where reference only to the principal methodology might cause investors to overlook other important aspects of the credit rating, including any significant adjustments and deviations, Creditreform Rating AG explains this fact in the credit rating and indicates how the different methodologies and other

aspects are taken into account in the credit rating. This information is integrated in the credit rating report.

The meaning of each rating category, the definition of default or recovery, and any appropriate risk warning, including a sensitivity analysis of the relevant key rating assumptions, such as mathematical or correlation assumptions, accompanied by worst-case scenario credit ratings as well as best-case scenario credit ratings, are explained.

The date at which the credit rating was released for distribution for the first time and when it was last updated including any rating outlooks, is indicated clearly and prominently in the rating report and/or press release as a "Rating action"; first release is indicated as "initial rating", other updates are indicated as an "update", "upgrade or downgrade", "not rated", "confirmed", "selective default" or "default".

In the case of a rating outlook, the time horizon is provided during which a change in the credit rating is expected. This information is available within the rating report and/or press release.

In accordance to Article 11 (2) EU-Regulation (EC) No 1060/2009 registered or certified credit rating agency shall make available in a central repository established by ESMA information on its historical performance data, including the ratings transition frequency, and information about credit ratings issued in the past and on their changes. Requested data are available at the ESMA website: <https://cerep.esma.europa.eu/cerep-web/statistics/defaults.xhtml>.

An explanatory statement of the meaning of Creditreform`s default rates are available in the credit rating methodologies disclosed on the website.

## Disclaimer

Any rating performed by Creditreform Rating AG is subject to the Creditreform Rating AG Code of Conduct which has been published on the web pages of Creditreform Rating AG. In this Code of Conduct, Creditreform Rating AG commits itself – systematically and with due diligence – to establish its independent and objective opinion as to the sustainability, risks and opportunities concerning the enterprise or the issue under review.

Future events are uncertain, and forecasts are necessarily based on assessments and assumptions. This rating is therefore no statement of fact, but an opinion. For this reason, Creditreform Rating AG cannot be held liable for the consequences of decisions made on the basis of any of their ratings. Neither should these ratings be construed as recommendations for investors, buyers or sellers. They should only be used by market participants (entrepreneurs, bankers, investors etc.) as one factor among others when arriving at corporate or investment decisions. Ratings are not meant to be used as substitutes for one's own research, inquiries and assessments.

We have assumed that the documents and information made available to us by the client are complete and accurate and that the copies provided to us represent the full and unchanged contents of the original documents. Creditreform Rating AG assumes no responsibility for the true and fair representation of the original information.
